

## **04024 Yamaha Viking Rear Dust and Window Panel**

The Dust Panel keeps out the dust wind and rain that comes in with the back draft on UTV's that have windshields and roofs installed.

### **Durable Construction:**

Constructed from ultra tough UV coated nylon and a vinyl window. The Viking dust panel incorporates reinforcement strips to protect it from rubbing against the headrests. A center metal support rod adds additional structure as the panel curves up toward the roof.

### **Tight Fit:**

The Seizmik dust panel is designed to provide the tightest fit on the market thanks to its industrial grade Velcro straps that wrap around the roll bars. The Viking dust panel fully extends from under the roof all the way down the back of the vehicle.

### **Large Viewing Area:**

Seizmik dust panels are equipped with extra large viewing windows. The Viking dust panel window unzips for ventilation. Integrated straps hold the rolled up window out of the way.

### **Trailerable:**

The durable materials, tight fitment and the elimination of loose straps enable all of Seizmik Dust Panels to be trailered to 65 mph with properly installed windshields.

### **Easy Install and Removal:**

All Seizmik dust panels can be removed and installed in less than 10 minutes, with no drilling or tools required. The Viking dust panel also includes handy pull-tabs to allow installation without removing the roof.
